

Name: SAMPLE  
 Provider: SAMPLE DOCTOR  
 Sample Type: Bloodspot

**Gut Barrier Panel**

KBMO has created a unique Gut Barrier Panel which in recognition that leaky gut occurs across a spectrum we have included the following gatekeeper markers: Candida, Zonulin and Occludin. For each marker, we measure IgG 1-4 /C3d in addition to IgA 1 and 2.

Gut Barrier Panel		
	IgG1-4+C3d	IgA1-2
Candida	Negative	Negative
Zonulin	Negative	Negative
Occludin	Negative	Negative
LPS	Positive	Negative

**Candida:**  
 we measure and use any candida overgrowth in the stomach/dysbiosis as a precursor to leaky gut occurrence

**Zonulin:**  
 Is a marker of intestinal permeability, otherwise known as leaky gut. If a patient has elevated Zonulin levels, the normal regulation of the tight junctions is compromised. This Zonulin marker is unique to KBMO please follow the link for more information:  
<http://kbmodiagnostics.com/zonulin-test/>

**Occludin:**  
 is a marker of tight junction stabilization and optimal barrier function. Elevated occludin indicates that the tight junctions are breaking down.

Lipopolysaccharides (LPS) are a major structural component of the outer membrane of gram-negative bacteria. Elevated levels of antibody against LPS may be indicative of Leaky Gut Syndrome and other gastrointestinal inflammatory diseases.

**GB Panel Interpretation:**  
**If any of the 8 markers are positive, we recommend to consult your provider with regards a gut healing protocol.**
